Owing to the length of the vestibules of the new street cars, it has been found necessary to make some changes at two or three of the loops. It was found that the car could not turn at the College Hill loop because the waiting room was in the way, and it was necessary to cut away a portion of it. This was done yesterday and Number 202 has been making regular trips on the line today. Number 201 has been on the Main street line.
